

STREMAC Advisory

Title: Alternative Forms of Medical Control Communication

Number: 09-02

Effective Date: 6/15/09

Purpose

To promote efficient, safer and reliable communication between field providers and medical control.

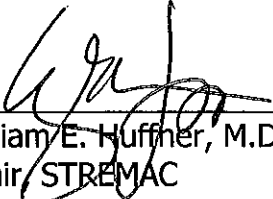

Background

Some field providers have been encouraged to use communication methods other than established radio methodologies.

Directions

When routine radio communication is not possible, providers are encouraged to use alternative recordable methods of communication. These alternate methods might include land line or mobile technology that is recordable on its own, or recordable through a patched system of a communication center.

Authorized

William E. Huffner, M.D.
Chair, STREMAC
